

THE INNER CIRCLE EDGE · FIELD GUIDE

3 Grok Bot Workflows You Can Set Up Today

Grok Bot now reads X by itself, runs Claude Code and Codex on its own computer, and writes you a local newsletter every morning. Here is how to set up each one.

COPY-PASTE PROMPTS | STEP BY STEP | REAL SAMPLE

START HERE

The short version

Grok Bot now reads X with no setup. It can search posts, follow accounts, and watch a topic for you.

You can run Claude Code and Codex inside Grok Bot. They use the Claude and ChatGPT plans you already pay for. No API keys.

Grok Bot can write you a local newsletter. It scans X and the web for your city every morning.

Send the newsletter anywhere. Save it to Google Docs, post it in Slack, or email it to your family.

Every workflow has a prompt you can paste. Setup takes minutes, not hours.

WORKFLOW 1

88 Grok Bot reads X for you

No plugin. No connector. It works for all users today.

What changed

Grok Bot can now search, read, and monitor X on its own. The official announcement says you can ask it to track feedback on your product, follow a breaking story, or send a weekly roundup of your industry.

What it can do

- **Search posts** by keyword, hashtag, or topic.
- **Read a creator's recent posts.** For example: "Scan the last 30 posts from @handle."
- **Look up profiles and mentions,** and see who quoted or reposted a post.
- **Check trends and news.**
- **Watch an account or topic on a schedule** and tell you when something new appears.

What it cannot do

- **It only sees public posts.** It cannot see your DMs, bookmarks, or home timeline.
- **It cannot post.** It reads only.
- **It has daily limits.** In testing: 30 reads a minute, 1,000 a day, and up to 25 results per read.
- **Search covers recent posts,** about the last month in testing.

Try it now

```
Search X for posts from the past 7 days about [YOUR TOPIC]. Give me the 5
most-discussed points, with a link to the best post for each.
```

```
Every Monday at 9 AM, scan the last 30 posts from [@HANDLE] and send me the
3 that got the most replies, with one line on why each one worked.
```

Want it to read your own account?

Connect the **X plugin** and sign in once. Then Grok Bot can read your bookmarks, DMs, and home timeline. It still cannot post, and it does not seem to manage bookmark folders.

If you need something the plugin cannot do, Grok Bot can use X in its own browser while you are logged in. That works, but it is slower.

Why X beats the web for some jobs

In a test briefing about one city, about two thirds of the useful items came from X.

X is better for	Why
Speed	Stories appear on X hours before any article exists.
Direct sources	City, police, transit, and weather accounts post their own updates.
What people are saying	Local chatter and rumours only exist as posts.
Checking a story	You can see if several separate accounts report the same thing.

The web is still better for **exact details**: event times, prices, forecasts, and explainers. **The best results come from using both.**

WORKFLOW 2

>_ Claude Code and Codex inside Grok Bot

Use the Claude and ChatGPT plans you already pay for. No API keys.

Grok Bot has its own always-on computer in the cloud. Install **Claude Code** (Anthropic) and **Codex** (OpenAI) there. Grok Bot handles your schedule, X, and apps. They do the heavy coding and analysis.

Why this is useful

- **Log in once, every bot can use it.** All your Grok Bot bots share the same computer.
- **No API keys.** It uses your existing Claude and ChatGPT plans.
- **Your Claude connectors come with it.** Gmail, Google Drive, Calendar, Slack, and Notion connectors from your Claude account show up in Claude Code when you sign in.
- **It runs while you sleep.** Your own computer can be off.

Things to know first

- **The chats stay on Grok Bot's computer.** They do not appear in the Claude or ChatGPT apps on your own computer. Grok Bot sends you the results, and it can share the full log if you ask.
- **Usage counts against your plans** for every bot that uses them.
- **Local tools do not come along.** MCP servers set up only in the Claude desktop app must be installed separately. Some connectors may also need you to sign in again.

DO THIS FIRST

Switch on one ChatGPT setting

Codex signs in with a **device code**, a short code you type into a web page. ChatGPT blocks this by default.

1. Open **ChatGPT**.
2. Go to **Settings → Security**.
3. Switch on **Device code authorization**.

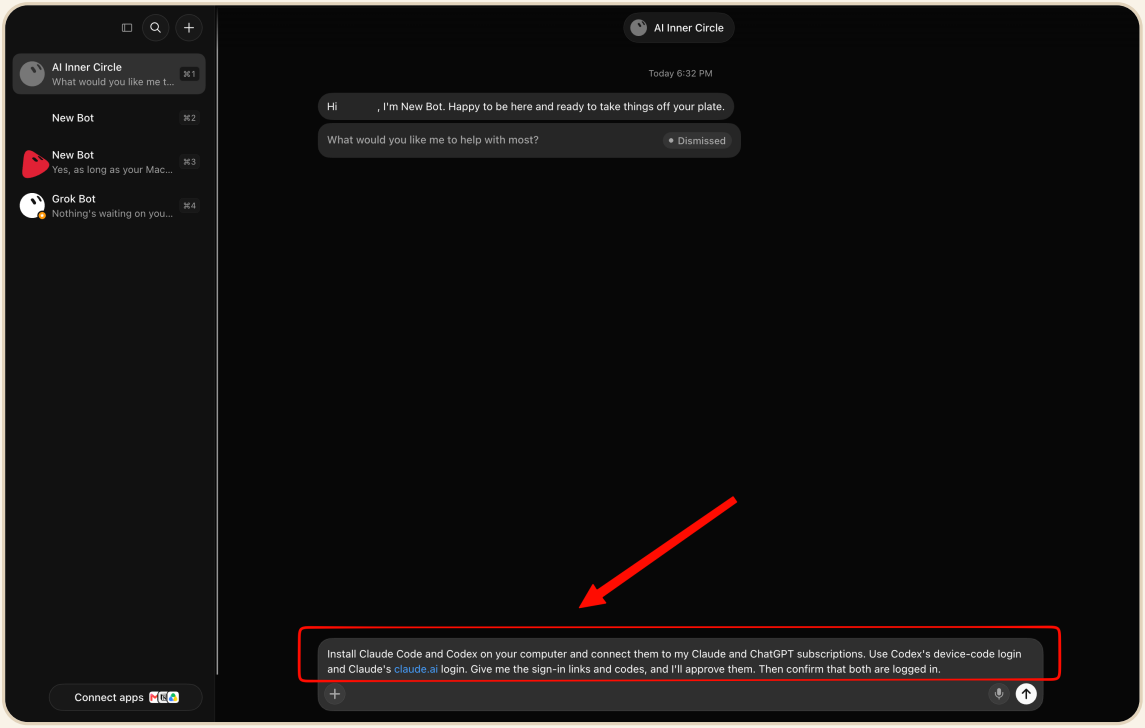

> **Skip this and the Codex sign-in fails.** On a ChatGPT work or school account, your admin may need to switch it on for you.

The setup prompt

Paste this into Grok Bot:

```
Install Claude Code and Codex on your computer and connect them to my Claude and ChatGPT subscriptions. Use Codex's device-code login and Claude's claude.ai login. Give me the sign-in links and codes, and I'll approve them. Then confirm that both are logged in.
```

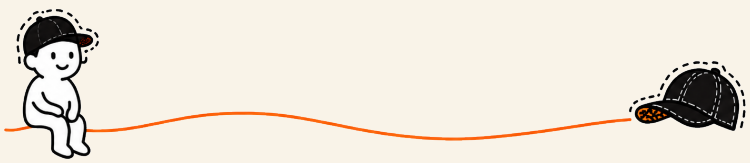

> Paste the prompt into the message box of any Grok Bot chat and send it.

What happens next (about 3 minutes)

1. **Grok Bot installs both tools.**
2. **Codex:** Grok Bot sends a sign-in link and a one-time code. Open the link, sign in with ChatGPT, and enter the code.
3. **Claude:** Grok Bot sends a Claude sign-in link. Approve it, copy the code Claude shows you, and paste it back into the chat.
4. **Grok Bot checks** that both logins work.

Then check which Claude connectors came along:

```
Show me which of my Claude connectors your Claude Code can see.
```

5 things to do with it

Workflow	How it works
X research into a report	Grok Bot pulls a creator's last 30 posts. Claude Code finds the themes and top performers. You get a weekly digest.
Build small tools	Claude Code writes the script. Codex reviews and tests it. Grok Bot runs it and sends you the file.
Two reviews on every code change	Both agents review your pull request. Grok Bot combines what they found.
Overnight jobs	Big clean-ups, data work, or document batches finish while you sleep.
Content start to finish	Research, then a draft, then charts. Nothing goes out without your approval.

Stay safe. You are giving Grok Bot's computer access to your Claude and ChatGPT accounts. Connect only what you need, keep approval on for anything that sends, posts, or spends, and ask Grok Bot to log out of both tools when you stop using them.

WORKFLOW 3

Your own local newsletter

Grok Bot scans X and the web for your city and writes a short briefing every morning.

You get weather, top stories, traffic, events, food, local decisions, and what people are talking about. You can read it in two minutes. Every item gets a label, so you know how much to trust it.

It works best in busy cities. In a small town, expect more sections that say "Quiet today."

Label	Meaning
Confirmed	From an official account or a known news outlet.
Developing	Several people report it. Nothing official yet.
Unverified	One post or a rumour. Only included if it matters for safety.

The prompt (fill in the brackets)

```
You are my local newsletter editor. Build a briefing for my area using the latest posts on X
plus any web sources you can access.

MY AREA: [City / neighborhood, e.g. "Austin, Texas - focus on Downtown, East Austin, South
Congress"]
TIME WINDOW: [Past 24 hours for daily / Past 7 days for weekly]
MY INTERESTS: [e.g. food, live music, family events, traffic, housing, local politics]

HOW TO RESEARCH
- Search X for recent posts about my area. Search with the city name, neighborhood names,
local hashtags, and local landmarks.
- Prioritize these sources, in this order:
  1) Official accounts: city government, mayor, police/fire, transit, school district,
utilities, weather service.
  2) Local news outlets and verified local reporters.
  3) Venues, event organizers, restaurants, and community organizations posting their own
news.
  4) Regular residents, but only when several independent posts report the same thing.
- Ignore anything older than the TIME WINDOW, spam, engagement bait, and national stories
with no local angle.
- Do not invent details. If you can't confirm a date, time, location, or price, say so.

LABEL EVERY ITEM WITH A RELIABILITY TAG
- CONFIRMED: from an official account or a credible outlet.
- DEVELOPING: several reports, nothing official yet.
- UNVERIFIED: a single post or a rumor. Include it only if it's important for safety or
highly relevant.

OUTPUT FORMAT (keep it short and easy to skim, like a morning newsletter)

[AREA] Briefing: [Date]
WEATHER & HEADS-UP: One or two lines on the forecast, air quality, and any alerts.
TOP STORIES (3-5): For each one, a bold headline, 1-2 sentences, a line starting "Why it
matters:", the reliability tag, and a source link.
GETTING AROUND: Road closures, transit changes, traffic, and parking or street cleaning.
EVENTS (5-8, soonest first): For each one, Name, Day/Date, Time, Venue, Price (or "Free"),
and a link. Flag anything free or family-friendly.
FOOD & NEW SPOTS: Openings, closures, pop-ups, and deals.
CIVIC & COMMUNITY: Council decisions, schools, housing and development, and public meetings.
WHAT LOCALS ARE TALKING ABOUT: The 1-2 most-discussed topics, summarized neutrally.
COMING UP: Key dates in the next 7 days.

RULES
- Total length under 500 words for daily, under 900 for weekly.
- Neutral tone, no opinions. Leave out personal information about private individuals.
- If a section has nothing worth reporting, write "Quiet today".
- End with: "Sources: X posts and web results from [time window]. Verify important details
before acting."
```

Make it arrive every morning

Paste this right after the prompt:

```
Turn this into a routine that runs every morning at 7:00 AM my time and sends me the briefing here.
```

Want it weekly? Use "every Saturday at 8:00 AM" and set TIME WINDOW to the past 7 days. Grok Bot asks you to confirm the routine once. After that it runs by itself, even when you are away.

Send it where you will read it

The briefing does not have to stay in the Grok Bot chat. If you connect an app with **Connect apps** in Grok Bot, add one line to the routine:

Save it to Google Docs

```
Save each briefing as a new Google Doc in a Drive folder called "Local Briefings", named with today's date.
```

Post it in Slack

```
Post the briefing in my #local-news Slack channel.
```

Email it to your family

```
Email the briefing to me and [NAME@EMAIL.COM] with the subject "Morning briefing: [date]".
```

Add it to Notion

```
Add each briefing as a new page in my Notion "Local News" database.
```

REAL SAMPLE

What a real briefing looks like

We tested it on Austin, Texas. One run pulled two new Michelin stars, festival transit plans, a police update, an air quality alert, 6 events with prices, two council decisions, and local robotaxi chatter.

About 410 words. Every item linked to a source. Only 13 X reads used out of 1,000.

Austin Briefing: Fri, Oct 9, 2026

WEATHER & HEADS-UP

Sunny, high near 94°F through Sunday. **Ozone Action Day today,** so sensitive groups should limit time outdoors.

TOP STORIES

Two Austin restaurants earn first Michelin stars. Fabrik and Kappo Kappo each got one star, giving Austin seven starred restaurants, the most in Texas.
Why it matters: Reservations will get harder. ✅ Confirmed

EVENTS

Lone Star Zine Fest · Sat–Sun · Noon–6 p.m. · Blue Genie Art Bazaar · Free, all ages

WHAT LOCALS ARE TALKING ABOUT

Robotaxi surge: Trackers say the city's registered fleet jumped by about 150 overnight. 🟡 Nothing official yet

SAVE THIS PAGE

Cheat sheet

Workflow	What you paste	Setup time
Read X	"Search X for posts about [topic]..."	None. It already works.
Claude Code + Codex	The setup prompt, after the ChatGPT device code setting	About 3 minutes
Local newsletter	The newsletter prompt, the routine line, and one "send it to" line	About 5 minutes

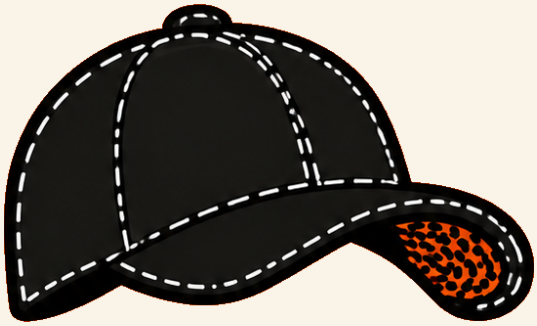

Before you start

- **These features are new.** Limits and behaviour may change quickly.
- **The read limits come from testing,** not from an official page. Treat them as a guide.
- **Check important details yourself.** A briefing is a starting point, not the final word.
- **Read the first briefing before it posts.** Slack and email send messages for you.
- **Watch your plan usage.** Claude Code and Codex draw from your plans every time a bot uses them.

The one thing to do today

Paste the newsletter prompt into Grok Bot, fill in your city, and add the 7 AM routine. Tomorrow morning, your own local newsletter is waiting for you.

Set it up once.
Let it work for you every single day.

WEAR THE CAP. BE PART OF THE INNER CIRCLE.
